

Kissei Group Basic Environmental Policy

Basic Philosophy

Under our Group management philosophy: “The Kissei Group makes greater contributions to society through connection and harmony,” we work actively to protect the global environment as part of our corporate social responsibility and contribute to the creation of a prosperous and livable society.

Basic Policy

1. We take global environmental issues seriously and, recognizing that our corporate activities have various impacts on the environment, we promote the reduction of the environmental footprint of our entire value chain.
2. In our global environmental protection efforts, we evaluate and analyze the impact of our business activities on the environment and nature. We set medium- and long-term targets for the achievement of net zero CO₂ emissions by 2050 and strive for continuous improvement.
3. We actively promote resource circulation, including energy and resource conservation and waste reduction, the adoption of renewable energy, the preservation of biodiversity, and the appropriate use and discharge of water resources.
4. Every individual employee strictly complies with relevant environmental laws, regulations, agreements, and other requirements. They aim to raise their environmental awareness and ethical values through environmental education and actively promote activities for the prevention of environmental pollution.
